

# Faculty Representatives Termly Report

2017-18 (Termly Report 2)

---

**Your Name:** Bodoor Yaseen

**Your Faculty & Role:** Faculty of medicine , Postgraduate representative and representative of Human Tissue Repair course

## Faculty Priorities:

What do you think the most pressing student needs in the Faculty are? How/why have you come to this conclusion?

An important issue in the division of medicine as I discussed with students from different departments is the difficulty in choosing the right research group to work with during the research part of the course. More description about the research need to be provided to students.

You may wish to mention any sources of evidence reviewed, and work with Lead Department Reps, Course/Research Student Reps, or students in the faculty more widely.

## Meetings in the Faculty:

Discuss any meetings you've attended with the Faculty – this might include formal committees, such as Faculty Teaching Committees, and informal meetings with Faculty staff. What was discussed? What were the outcomes? What did you say and how did it go?

From the several meetings I attended , I would like to discuss an informal meeting with Prof. Tim McHugh ( faculty graduate tutor ). I addressed several issues my colleagues and I faced and he took immediate actions and was so helpful.

If there was any positive (or negative) outcomes to your discussion, what were they?

The outcomes were positive as he contacted certain faculty members to get our issue solved.

## Meetings with the Union:

What priorities have you raised with the Union as a representative of your Faculty, either as part of Council, or in informal meetings with officers such as the Faculty Rep Forum? What is the Union working on that you think might have a

positive/negative impact on your faculty? What would could the Union do for students in your faculty that you'd like to see?

I didn't have the time unfortunately to attend any faculty Rep Forum . The timing was inconvenient for me.

**Other comments:**

Please include any other thoughts or anything else you'd like to tell students about here.
